

▶ Masterclass Day 27

# Commodity & Currency Market

Beyond stocks: Trading the physical building blocks of global trade, precious metals, and forex dynamics.

# The Ultimate Safe Haven: Gold

**Gold** is universally revered as the supreme safe-haven asset and an ultimate hedge against geopolitical crisis and currency inflation.

- » **Inflation Shield:** When fiat currencies lose purchasing power, institutional investors rush into gold bullion.
- » **MCX Trading:** Traded heavily on commodity exchanges like MCX in India through futures and mini-contracts.
- » **Inverse USD Correlation:** Gold prices typically move inversely to the US Dollar and US Treasury bond yields.

# The Industrial Precious Metal: **Silver**

## **More Than Just Jewelry**

Silver behaves both as a precious monetary metal and a critical industrial raw material.

- » **Green Energy Demand:** Essential for solar panels, electric vehicles, electronics, and medical equipment.
- » **Higher Volatility:** Often nicknamed "poor man's gold," silver experiences sharper price swings than gold during market trends.

# The Global Energy Backbone: Crude Oil

**Crude Oil** is the world's most heavily traded and geopolitically sensitive commodity.

**OPEC & Supply Control:** Major cartel decisions dictate global production quotas, directly swaying energy prices.

**Inflation Driver:** Because oil powers global transport and manufacturing, spiking crude prices instantly trigger economy-wide inflation and pressure equity markets.

# The Forex Benchmark: USD-INR

## Understanding Forex Basics

The USD-INR pair represents how many Indian Rupees (INR) are required to purchase one US Dollar (USD).

**Import Impact:** A rising dollar makes crude oil and electronics imports expensive for India, increasing trade deficits.

## RBI Intervention

The Reserve Bank of India actively intervenes in the forex spot and derivatives market to curb extreme currency volatility.

Traders can speculate or hedge currency risk on NSE and BSE currency derivatives segments using lot sizes.

# Great Job on Day 27!

Tomorrow: Day 28 - Macroeconomics.

Stay disciplined, master your risk, and trade wisely!
